API Testing and Monitoring

The screenshot shows the Postman interface with the 'VacQ' collection selected. The 'Run results' tab is active, displaying a table of test results for the 'VacQ' runner. The table includes columns for Source, Environment, Iterations, Duration, All tests, and Avg. Resp. Time. The results show that all tests passed, with a total duration of 902ms and an average response time of 115 ms.

Source	Environment	Iterations	Duration	All tests	Avg. Resp. Time
Runner	VacQ	1	902ms	6	115 ms

Below the table, the 'All Tests' section shows a list of tests that passed, including 'GET All Hospitals', 'POST Create New Hospital', 'GET Single Hospital', 'PUT Update Single Hospital', and 'DELETE Single Hospital'. Each test entry includes the HTTP method, endpoint, status code, and response time.

The screenshot shows the Postman interface with the 'Hospital API Monitor' collection selected. The 'Monitor' tab is active, displaying a summary of test results for the 'Hospital API Monitor' runner. The summary indicates that all tests passed, with a total duration of 0 failed tests, 0 errors, and 1 region (US (East)).
